Bettenhausen B., de Angelis M.H., Simon D., Guenet J.-L., Gossler A.;

Transient and restricted expression during mouse embryogenesis of

TIL, a murine gene closely related to Drosophila Delta.";

Development 121:2407-2418 (1995).

In Charlow. May be involved in cell-to-cell communication in

mammalian embryos. May have a role in cellular interactions

underlying somitogenesis and development of the nervous system.

In SUBUNIT: Interacts with Notch receptors.

In SUBCELLULAR LOCATION: Type I membrane protein.

In TISSUE SPECIFICITY: In the embryo, expressed in the paraxial

mesoderm and nervous system. Expressed at high levels in adult

heart and at lower levels, in adult lung.

In DERCOMMENTAL STAGE: Expressed until day 15 in the embryo.

Expression then decreases and increases again in the adult.

IN SIMILARITY: Contains 1 DSL domains.

I Differential effects of Notch ligands Delta-1 and Jagged-1 in human lymphoid differentiation.";
J. Exp. Med. 194:991-1001(2001).
L. Exp. Med. 194:991-1001(2001).
C. I- FUNCTION: Acts as a ligand for Notch receptors. Blocks the differentiation of progenitor cells into the B-cell lineage while promoting the meregence of a population of cells with the characteristics of a T-cell/NK-cell precursor.
C. I- SUBUNIT: Interacts with Notch receptors.
C. I- SUBCHICITY: Expressed in heart and pancreas, with lower expression in brain and muscle and almost no expression in placenta, lung, liver, and kidney.
C. I- SIMILARITY: Contains B EGF-like domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    MEDLINE-22887296; PubMed=12975309; DOI=10.1101/gr.1293003;
